FOCUSRITE SCARLETT 18i20

4th Generation
The Original. Remastered.

Scarlett 18i20 is the industry-leading USB audio interface for project studios, with pro-grade converters taken directly from Focusrite's flagship RedNet range. It's ideal for tracking; the eight 4th Gen mic preamps have an impressive 69dB of gain, capable of capturing the most dynamic performances, with Auto Gain and Clip Safe modes taking care of levels so you can focus on the take. Scarlett 18i20 is also the perfect hub to integrate your DAW and hardware with more than enough analogue and digital I/O to connect a huge number of external instruments, processors and effects, and manage complex routing with incredible ease via Focusrite Control 2 software.

Key Features

18 inputs and 20 outputs; including eight mic preamps, line, instrument and MIDI I/O:
Fully equipped for demanding project studios with ADAT, SPDIF, and Word Clock I/O

4th Gen pre-amps with 69dB of gain:
The legendary preamps now have even more gain and are remote controllable

Auto Gain and Clip Safe modes:
18i20 can automatically manage levels so engineers can focus on capturing the performance
